Asian Americans

U.S. Demographic and Socioeconomic Facts

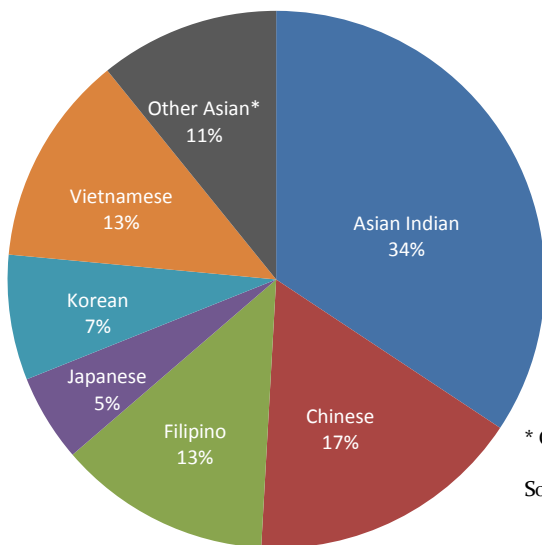

- According to the 2010 U.S. Census, 4.8% of the American population identify themselves as Asian only.¹
- The three largest Asian groups in the U.S.: Chinese, Filipino, and Asian Indian (2011).¹
- Asians (and Hispanics) had the greatest percentage of populations residing in counties whose air quality did not meet EPA standards for particulate matter and ozone (2006-2008).²
- Compared to the total U.S. population, Asian Americans are:
 - less likely to live in poverty (12.8%)
 - more likely to be college graduates or hold graduate degrees (50%)
 - more likely to be in management (15.9%), business (28.5%), science (36%), and the arts (48.5%)

U.S. Health Facts

- Asian American women have the longest life expectancy (85.8 years).²
- Asian American women were least likely to have had a Pap test (2010).²
- Asian Americans/Pacific Islanders aged 19-24 years had an acute hepatitis B incidence (3.1 per 100,000) that was 1.6 times higher than non-Hispanic whites of the same age (1.9 per 100,000) (2008).²
- Asian Americans had a similar prevalence of diabetes as compared to the white population (2008).²
- The Asian American population has a high prevalence of HIV/AIDS, hepatitis B, smoking and tobacco use, and tuberculosis.²
