K-12 Schools Quarantine
(as of 10/25/21, subject to change)

Updated 10/25/21

Updated School Quarantine Guidance for Unvaccinated Individuals

*Only Applies to Close Contacts in an In-School Environment*

The Ohio Department of Health updated its school quarantine guidance on October 25, 2021 to allow schools to adapt their quarantine procedures, to allow for individuals that have been identified as a close contact in a school environment, may use the following updated quarantine procedures outline below:

**Mask to Stay**
Direct contacts, regardless of vaccination or masking status, may remain in the classroom environment if they do the following:

- Wear a mask for 14 days after their last date of exposure.
- Self-monitor, or parent-monitor, for symptoms of COVID-19.
- Isolate and get tested if they start to experience symptoms associated with COVID-19 (regardless of level of severity).
- Consistent with guidance for others quarantining in lower-risk environments, students and staff may discontinue these quarantine procedures after seven days — if they don’t develop symptoms and test negative between days 5-7.

Direct contacts for COVID-19 are those individuals who are identified as being directly exposed to COVID-19 by the positive case. Remember, COVID-19 is a respiratory virus and does not require physical contact to spread. It is spread through sneezing, coughing, talking, and breathing. These factors should be considered when determining level of exposure and direct contacts. Best practice for distancing is 3 ft with everyone masked, 6 ft if the individual is not masked.

*Parents and students are responsible for symptom monitoring; however, if nurses/school staff see a child exhibiting symptoms they should act accordingly.*

**Test to Play**
Contacts without symptoms may continue to participate in extracurricular activities if they do the following:

- Wear a mask when able. (This includes: transportation; locker rooms; sitting/standing on the sidelines; and anytime the mask will not interfere with breathing, the activity, or create a safety hazard.)
- Test on initial notification of exposure to COVID-19.

K-12 Student Quarantine Classroom Guidance 10/25/21
• Test again on days 5-7. If they are negative at this time, they will test out of quarantine.

*Please Note: The tests referenced above are SARS-CoV-2 viral (PCR or antigen) tests. They should be proctored/observed by someone and cannot be an over the counter, at-home test that was self-administered without a proctor.*

Districts should consider same day testing for athletic competitions where there is the potential of school-to-school exposure. If students involved in competitions become positive for COVID-19, contact tracing with other team does not need to occur; instead, send a general letter to notify the other team of the potential exposure.

These proposed changes incorporate mask wearing and testing to reduce the chance of spread of COVID-19 within structured school settings and provides a safe alternative to quarantine.

The Ohio Department of Health has determined that the new school quarantine recommendation was informed by a growing body of national experience, a pilot in Warren County, and experience shared by other local health departments that points toward a low number of individuals with direct contact to a COVID-19 positive individual within a school setting who convert to positive cases. Based on this information and the success of the Warren County pilot, they have updated their recommendation for K-12 students and staff exposed to COVID-19 in a school setting.

**School Quarantine Guidance for Vaccinated Individuals**

Public Health - Dayton & Montgomery County recommends that K-12 schools’ quarantine procedures allow that those students, faculty and staff that may have been exposed to a person with COVID-19 in a classroom setting or on school provided buses, do not need to self-quarantine, provided that all parties were properly wearing face masks and social distancing was maintained as appropriate, which includes at least 3’ to 6’ of distance in the classroom. With 6’ being preferred.

The above exception does not apply to sports or extra-curricular activities.

All other exposure should follow the standard quarantine procedures. Those exposed, but not quarantined, should continue to monitor themselves for symptoms for 14 days and initiate a self-isolation if any symptoms develop. If unable to complete a 14-day quarantine. Quarantine may also be 10 days without testing or after 7 days and a negative test result after day 5 or later.

**Vaccinated persons with an exposure to someone with suspected or confirmed COVID-19 are not required to quarantine if they meet all of the following criteria:**

- Are fully vaccinated (i.e., ≥2 weeks following receipt of the second dose in a 2-dose series, or ≥2 weeks following receipt of one dose of a single-dose vaccine)
- Have remained asymptomatic since the current COVID-19 exposure

Persons who do not meet all 2 of the above criteria should continue to follow current quarantine guidance after exposure to someone with suspected or confirmed COVID-19.

After quarantine you should watch for symptoms for 14 days after exposure, immediately isolate if you develop symptoms, and continue to wear a mask, stay 6’ from others, avoid crowds and wash your hands.
