

## The Naloxone (Narcan™) Distribution Program

Naloxone (also known as Narcan™) is a safe medication that can reverse an overdose that is caused by an opioid drug, such as prescription pain medication or heroin. When administered during an overdose, naloxone blocks the effects of opioids on the brain and quickly restores breathing. Naloxone has been used safely by emergency medical professionals for more than 40 years to reverse the effects of opioids in order to prevent overdose deaths.

**YOU CAN  
STOP  
OVERDOSE  
DEATH**

Naloxone has no potential for abuse.

Participants will receive a naloxone kit after they register and receive training on:

- Recognizing the signs and symptoms of overdose.
- Risk factors of an opioid overdose.
- Performing rescue breathing.
- Calling emergency medical services.
- Administering intranasal naloxone.
